1991 through 1996 average = 4,186

Note:

All pumping volumes are listed in AF/yr.

TABLE ES-2

Annual Pumping Rates Specified by the Operational Plan for the Santa Clarita Valley's Groundwater Resources
Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Aquifer	Normal Years	Dry Year 1	Dry Year 2	Dry Year 3
Operational Plan Pumping				
Alluvium	30,000 to 40,000	30,000 to 35,000	30,000 to 35,000	30,000 to 35,000
Saugus	7,500 to 15,000	7,500 to 25,000	21,000 to 25,000	21,000 to 35,000
Total	37,500 to 55,000	37,500 to 60,000	51,000 to 60,000	51,000 to 70,000
Modeled Pumping				
Alluvium	38,429	33,767	33,767	33,767
Saugus	10,679	15,760	24,346	34,096
Total	49,108	49,527	58,113	67,863

Notes:

All pumping volumes are listed in acre-feet.

The operational plan is defined in the documents titled *Urban Water Management Plan 2000* (Black & Veatch, 2000) and *Santa Clarita Valley Water Report 2003* (Luhdorff & Scalmanini Consulting Engineers, 2004).

In the model simulations, total pumping is different than listed in this table when dry-year pumping conditions in one aquifer coincide with normal-year pumping conditions in the other aquifer (due to differences in the timing of dry conditions locally versus reduced deliveries of water imports from the State Water Project).

TABLE ES-3

Well Network for Sentinel Groundwater Quality Monitoring

Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Production Well	Sentinel Monitoring Locations	New Monitoring Well Needed?	Actual or Target Depth Interval for Well Screen (ft bgs)	Well Name	TOT Distance from Production Well	Rationale, Comments
SCWC-Saugus1	Alluvium: New well in Magic Mountain Parkway north of Saugus1	Yes	40-60	AL-12A	1 year or less	Alluvial and Saugus HSU S-I monitoring is for a possible pathway to SCWC-Saugus1. Access constraints might require installation of these wells in the City of Santa Clarita right of way along Magic Mountain Parkway. There are currently no Saugus Formation monitoring wells within the delineated capture zone of SCWC-Saugus1. The Saugus wells for HSU S-III will be installed near the corner of San Fernando Road and Magic Mountain Parkway on land owned by the Newhall Land & Farming Company.
	Saugus (S-I unit): Adjacent to new alluvium well	Yes	170-180	AL-12B		
	Saugus (S-III unit): NLF land north of SCWC-Saugus1	Yes	230-250 (HSU S-I)	SG1-HSU1		
		Yes	490-520 (HSU S-III)	SG1-HSU3a		
		Yes	580-640 (HSU S-III)	SG1-HSU3b		
		Yes	750-770 (HSU S-III)	SG1-HSU3c		
SCWC-Saugus2	Alluvium: Existing well AL06	No	65-85	AL06	10 years	Alluvial monitoring is recommended to assess perchlorate near the SCWC-Saugus2 well. At MP-1, the port 2 screen correlates with the top of the screened intervals at SCWC-Saugus1 and SCWC-Saugus2. Port 4 is the uppermost port below a depth of 1,000 feet and below the zones containing perchlorate.
	Saugus: MP-1, ports 2 and 4	No	391.4-401.4 (HSU S-III)	MP-1 (port 2)		
		No	747.5-757.5 (HSU S-V)	MP-1 (port 4)		
NCWD-11	Alluvium: Existing well AL03	No	91-111	AL03	2 years	Alluvial monitoring is recommended because of the potential for the Alluvial Aquifer to be a pathway for perchlorate migration from the site to well NCWD-11. Additionally, movement within the Saugus Formation could be occurring from the site, which is the reason to install a Saugus sentinel well near the Alluvial sentinel well.
	Saugus: New well at AL03 location	Yes	280-320 (HSU S-III)	NC11-HSU3		

Notes:

TOT = time-of-travel

HSU = hydrostratigraphic unit (See *Draft Final Conceptual Hydrogeology Technical Memorandum for the Eastern Santa Clara Sub-basin Groundwater Study* [CH2M HILL, 2004b] for discussions of the locations and characteristics of the HSUs.)

TABLE ES-4
 Chemical Constituents and Sampling Frequency for the 97-005 Sentinel Monitoring Program
Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Analytical Parameters	EPA Method	Frequency			
		Initial	Semiannual	Annual	Biannual
Organic Constituents					
Perchlorate	314.0	X	X

1991 through 1996 average = 4,186

Note:
 All pumping volumes are listed in AF/yr.

TABLE 2-1

Recharge and Discharge Components of the Hydrologic Cycle in the Upper Santa Clara River Basin
Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Recharge	Discharge
Surface Water	
Direct runoff of precipitation	Evapotranspiration of precipitation
Precipitation runoff from upstream watershed areas	Santa Clara River flow to Ventura County
Castaic Lake/Lagoon releases into Castaic Creek	Streamflow seepage to the Alluvial Aquifer
WRP discharges into the Santa Clara River	Evapotranspiration of applied irrigation water
Groundwater seepage into the Santa Clara River	
Irrigation return flows (agricultural and urban)	
Groundwater	
Infiltration of precipitation	Pumping
Infiltration of outdoor applied water (agricultural and urban)	Evapotranspiration of Alluvial Aquifer groundwater by riparian vegetation
Alluvial Aquifer subsurface inflow (Castaic Dam, Lang gage)	Alluvial Aquifer subsurface outflow (western study area boundary)
Streamflow seepage to Alluvial aquifer	Groundwater seepage into the Santa Clara River

Notes:

The two sources of water for agricultural and municipal water uses in the basin are groundwater pumping and imported water from the SWP.

Because SWP water is stored in Castaic Lake, which is outside the limits of the Alluvial and Saugus aquifers, it is not considered a part of the valley's hydrologic cycle while it is still in storage. However, SWP water that is land-applied or that is discharged from a WRP qualifies as a component of the hydrologic cycle. In addition, subsurface groundwater flow occurs into the Santa Clarita Valley beneath Castaic Creek through water seepage beneath Castaic Dam.

TABLE 2-2

Historical Hydrology in Northern California and the Santa Clarita Valley, 1950 through 2003

Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Year	Northern California Hydrology^a	Local Rainfall^b

78	Above Normal	90	Normal (7,500-15,000)

^aDefined by water year, using DWR's Sacramento Valley Unimpaired Runoff Index: wet = wettest; critical = driest. SWP = State Water Project.

^bDefined from simulations performed by CLWA (Kennedy/Jenks Consultants, 2003) and USBR (2004) using the CALSIM II model. This condition is for the year 2020 level of development. In any given year, the allocation may be made up, in part, of carryover water from the prior year.

TABLE 2-6

Simulated Annual Groundwater Pumping from the Saugus Formation

Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

77	2002	7.90	30,000-35,000
78	2003	15.70	35,000-40,000

^aFrom records at Newhall-Soledad rain gage (Station No. FC32CE).

^bAlluvial pumping rates listed in this column are the rates that will occur under the operational plan for the Valley if the 1950 through 2003 local hydrology repeats itself in the future.

^cAlluvial pumping is set at the dry-year rate in years 12, 37, and 66 because each of these years is the first nondrought year that occurs after a multi-year drought ends.

TABLE 2-14

Water Demands and Indoor Water Use under Full Build-out Conditions (Excluding Newhall Ranch)

Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Year 2000 Actual (AF/yr)	Full Build-out Conditions (AF/yr)	Comments
Annual Urban Water Use Outside Newhall Ranch		
60,988	123,038	<p>Year 2000 value is retail purveyor demand plus other demands in Tables III-6 and IV-1 of the <i>Santa Clarita Valley Water Report 2000</i> (Luhdorff & Scalmanini Consulting Engineers, 2001).</p> <p>Year 2045 value is from Table 2.5-4 of the <i>Newhall Ranch Draft Additional Analysis</i> (Impact Sciences, Inc., 2001). Consists of 89,805 AF/yr Development Monitoring System (DMS)^a demand, plus 55,995 AF/yr additional urban demand, minus 14,480 AF/yr conservation, minus 5,193 AF/yr agricultural uses and 3,089 AF/yr “other” uses. Does not include 4,500 AF/yr for aquifer storage and recovery (ASR) or the 17,680 AF/yr demand for the Newhall Ranch Specific Plan.</p>
Annual Indoor Water Use Outside Newhall Ranch (Equal to LACSD WRP Influent Volumes)		
18,723	40,313 (average year)	<p>The year 2000 volume is from the Saugus and Valencia WRPs for the period January 2000 through December 2000. The long-term current generated effluent volume is based on the influent volume estimated from water balance calculations performed for the chloride mass balance analysis. The effluent volume is 32.8 percent of the total urban water production of 123,038 AF/yr, which includes other uses.</p>

^aDMS water demands are demands associated with future build-out of developments identified in Los Angeles County’s DMS for the Santa Clarita Valley.

TABLE 2-15

Total Annual	18,723	40,313	100.0	17,000	16,000	24,313	Total Annual

^aValues shown are the actual volume of treated water discharged to the Santa Clara River from the Saugus and Valencia WRPs during calendar year 2000. (See also Table 2-14.)

^bValues shown are the combined treated water volumes estimated to be produced by the Saugus and Valencia WRPs for full build-out conditions in the Santa Clarita Valley. These values do not include the future Newhall Ranch WRP, which will be operated by LACSD.

^cValues shown do not include discharges of treated water to the river from the future Newhall Ranch WRP. These volumes are 10 AF in November, 138 AF in December, and 138 AF in January. During the other nine months of the year, this WRP will not discharge treated water to the river (see the *Newhall Ranch Draft Additional Analysis* [Impact Sciences, Inc., 2001] for further details). The combined total discharge from the Saugus, Valencia, and Newhall Ranch WRPs is summarized in Table 2-16 of this report.

Note:

All units are in acre-feet, unless otherwise indicated.

TABLE 2-16

Note:
 All flow volumes are listed in AF/yr.

TABLE 3-1

Well Network for Sentinel Groundwater Quality Monitoring

Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Production Well	Sentinel Monitoring Locations	New Monitoring Well Needed?	Actual or Target Depth Interval for Well Screen (ft bgs)	Well Name	TOT Distance from Production Well	Rationale, Comments
SCWC-Saugus1	Alluvium: New well in Magic Mountain Parkway north of Saugus1	Yes	40-60	AL-12A	1 year or less	Alluvial and Saugus HSU S-I monitoring is for a possible pathway to SCWC-Saugus1. Access constraints might require installation of these wells in the City of Santa Clarita right of way along Magic Mountain Parkway. There are currently no Saugus Formation monitoring wells within the delineated capture zone of SCWC-Saugus1. The Saugus wells for HSU S-III will be installed near the corner of San Fernando Road and Magic Mountain Parkway on land owned by the Newhall Land & Farming Company.
	Saugus (S-I unit): Adjacent to new alluvium well	Yes	170-180	AL-12B		
	Saugus (S-III unit): NLF land north of SCWC-Saugus1	Yes	230-250 (HSU S-I)	SG1-HSU1		
		Yes	490-520 (HSU S-III)	SG1-HSU3a		
		Yes	580-640 (HSU S-III)	SG1-HSU3b		
		Yes	750-770 (HSU S-III)	SG1-HSU3c		
SCWC-Saugus2	Alluvium: Existing well AL06	No	65-85	AL06	10 years	Alluvial monitoring is recommended to assess perchlorate near the SCWC-Saugus2 well. At MP-1, the port 2 screen correlates with the top of the screened intervals at SCWC-Saugus1 and SCWC-Saugus2. Port 4 is the uppermost port below a depth of 1,000 feet and below the zones containing perchlorate.
	Saugus: MP-1, ports 2 and 4	No	391.4-401.4 (HSU S-III)	MP-1 (port 2)		
		No	747.5-757.5 (HSU S-V)	MP-1 (port 4)		
NCWD-11	Alluvium: Existing well AL03	No	91-111	AL03	2 years	Alluvial monitoring is recommended because of the potential for the Alluvial Aquifer to be a pathway for perchlorate migration from the site to well NCWD-11. Additionally, movement within the Saugus Formation could be occurring from the site, which is the reason to install a Saugus sentinel well near the Alluvial sentinel well.
	Saugus: New well at AL03 location	Yes	280-320 (HSU S-III)	NC11-HSU3		

Notes:

TOT = time-of-travel

HSU = hydrostratigraphic unit (See *Draft Final Conceptual Hydrogeology Technical Memorandum for the Eastern Santa Clara Sub-basin Groundwater Study* [CH2M HILL, 2004b] for discussions of the locations and characteristics of the HSUs.)

TABLE 3-2
 Chemical Constituents and Sampling Frequency for the 97-005 Sentinel Monitoring Program
Analysis of Perchlorate Containment in Groundwater Near the Whittaker-Bermite Property, Santa Clarita, California

Analytical Parameters	EPA Method	Frequency			
		Initial	Semiannual	Annual	Biannual
Organic Constituents					
Perchlorate	314.0	X	X		
Volatile Organic Compounds	524.2 ^a	X	X		
1,2,4-Trimethyl Benzene		X	X		
Methyl Tertiary Butyl Ether		X	X
